

DSBS Course

Indirect Treatment Comparisons

23rd September 2026

Hosted by Novo Nordisk A/S

Something to look forward to after the summer break!

Ever thought about how to compare treatments in the absence of a head-to-head trial?

We are excited to announce that DSBS will be hosting a 1-day course about this topic on the 23rd of September 2026.

This course will give you an introduction to indirect treatment comparisons, an established methodology for cross-trial treatment comparisons in health technology assessment and reimbursement, with increasing importance throughout the entire drug development life cycle.

Specifically, the objectives of the course are to:

- Understand potential use cases for performing indirect treatment comparisons across the value chain
- Assess the feasibility of performing an indirect treatment comparison
- Understand novel covariate adjustment methodologies developed for cross-trial comparisons
- Interpret the results and perform critical analyses of an indirect treatment comparison

The course will take place in person and consist of a combination of lectures and exercises. The course material will consist of slides.

The course will be led by Antonio Remiro-Azócar, Principal Scientist at Novo Nordisk A/S and an internationally recognised expert in quantitative evidence synthesis and indirect treatment comparisons.

Formal invitation and registration details will be shared in start August.

For now, simply save the date.
